PROFESSIONAL SUMMARY

Results-driven Software Developer with 6+ years of experience designing, developing, testing, and deploying enterprise-level applications. Proficient across modern programming languages, frameworks, and database management systems, with deep expertise spanning the full software development lifecycle (SDLC) — from requirements analysis and architecture through development, debugging, and long-term maintenance.

Known for strong problem-solving instincts, meticulous attention to detail, and a fast learning curve on new technologies and tools. Proven track record delivering high-quality, scalable, and maintainable solutions both independently and within agile, cross-functional teams. Embraces modern development practices, including AI-assisted coding tools (Claude, ChatGPT, GitHub Copilot), to streamline workflows and improve delivery speed without compromising code quality.

TECHNICAL SKILLS

Languages & Frameworks: C#, ASP.NET Core API, React.js, Angular, JavaScript, Material UI

Databases: Microsoft SQL Server

Tools & Platforms: GitHub, TFS (Team Foundation Server), SonarQube, Grafana, REST APIs, Exago Reporting

Practices: Agile/Scrum, Unit Testing, Code Review, CI/CD, AI-assisted development (Claude, ChatGPT, GitHub Copilot)

PROFESSIONAL EXPERIENCE

Developer | AMCS Group

Jan. 2024 – Sept. 2026

- Develop and maintain enterprise applications within the Central Engineering Team using C# ASP.NET Core API, Angular, and Microsoft SQL Server, following Agile methodology.
- Built and maintain a centralized REST API integrator consumed by both internal teams and external clients, enabling standardized data exchange across systems.
- Serve as Subject Matter Expert (SME) for enhancing Exago reporting, exposing report services for direct client utilization.
- Delivered new centralized specifications, including concurrency protection and standardized API methods for report generation.
- Author and maintain local environment setup documentation for the Central Engineering team, streamlining onboarding for new developers.
- Monitor code quality and application performance using SonarQube and Grafana, and track work items and sprint progress through TFS.
- Leverage AI-assisted development tools (Claude, ChatGPT, GitHub Copilot) to accelerate coding, debugging, and documentation throughout the development lifecycle.

Senior Specialist, Web Developer | Mercedes-Benz Group Services PH

Oct. 2022 – Dec. 2023

- Introduced React.js, Material UI, C# ASP.NET Core API, and Microsoft SQL Server as the core technology stack for application development, establishing a foundation later adopted across internal MBGSP projects.
- Introduced GitHub as the team's version control and project management repository, authoring the base React component architecture and REST API structure used for internal applications.
- Led discussions on system functionality and process flow, contributing directly to solution design and architecture decisions.
- Consistently delivered applications ahead of schedule and beyond stakeholder expectations.
- Conducted knowledge transfer sessions on application structure and architecture for team members and stakeholders.
- Achieved early regularization based on demonstrated performance and delivery impact.

Seat Reservation Application

- Developed the first MBGSP application built on the newly introduced technology stack, from the ground up.
- Delivered and deployed within a short implementation window while maintaining full ongoing support.

Login/Logout & Overtime Request System

- Built the application from scratch, integrating directly with the company's Timekeeping system.
- Provided continuous support and enhancements post-launch to improve reliability and usability.

Policy Application

- Integrated stored procedures into the API layer to streamline data processing.
- Implemented a dynamic Questionnaire Module and an e-signature feature, generating downloadable PDF confirmations for user acknowledgment.

Technical Specialist II | Alliance Software Inc.

Jan. 2021 – Nov. 2022

Pando Survey Application (React.js)

- Developed reusable, responsive UI components supporting multiple viewport breakpoints (xs, md, lg, xl) to ensure consistent user experience across devices.
- Authored unit test scripts and documentation to support reliable, maintainable test coverage for the survey application.
- Maintained and collaborated on ongoing web application updates, ensuring feature stability across releases.
- Conducted code debugging, bug fixing, and testing to maintain application quality and performance.

UNILAB (Angular, C# ASP.NET Core API, Microsoft SQL Server)

- Upgraded front-end and back-end framework versions, modernizing the application's technical foundation.
- Performed debugging, bug fixing, and testing throughout the upgrade process to ensure a stable, seamless transition.
- Maintained accurate, timely ticket updates to support weekly progress reporting and sprint visibility.

Internal Apps / Alliance WebPOS (React.js)

- Debugged, enhanced, and tested the Alliance WebPOS application, improving reliability and functionality.
- Supported fellow developers by troubleshooting front-end issues and providing technical guidance as needed.
- Maintained up-to-date ticket status and actively contributed feedback during daily stand-up meetings.

Associate Software Engineer | Accenture Inc.

Aug. 2018 – Aug. 2020

CIO/MARCOMM (Sitecore, ASP.NET MVC, MS SQL Server, jQuery)

- Developed components integrating Sitecore with existing pages, redesigning legacy Accenture.com pages onto the Sitecore platform.
- Collaborated closely with the Scrum team throughout the development and redesign process.
- Implemented REST APIs to support backend functionality for the redesigned pages.
- Conducted code debugging, bug fixing, and testing to ensure a stable, high-quality redesign rollout.
- Reintroduced and implemented MOQ for API unit testing and SinonJS for front-end unit testing, improving overall test coverage.

Quality Management System (AngularJS, ASP.NET Core API, MS SQL Server)

- Developed reusable common components to support centralized, consistent design across the system.
- Collaborated with the Scrum team to align on requirements and delivery timelines.
- Implemented REST APIs to support backend functionality for system enhancements.
- Conducted code debugging, bug fixing, enhancements, and testing to support ongoing system improvements.

EDUCATION

Bachelor of Science in Information Technology

March 2018

Asian College of Technology International Educational Foundation, Cebu City
